

The Push

When a bishop enters the **bonus square** (by moving or by capturing onto it), it may **push one enemy piece on an adjacent square one square directly away**.

Rules of the push

- ▶ **Direction:** any of the 8 compass directions (straight or diagonal), one square only.
- ▶ **No capture:** the pushed piece simply relocates; it is never removed from the board.
- ▶ **Once, on entry:** the push is available only the turn the bishop arrives. A bishop parked on the square gets no further pushes.
- ▶ **Color matters:** only a bishop of the square's color can ever reach it (a dark-squared bishop can never use a light bonus square).
- ▶ **It can give check or checkmate** — that is the whole point of the move.

WHAT YOU MAY NOT DO

Restrictions & Edge Cases

- ✗ **No enemy adjacent?** Then nothing happens - the push simply isn't used.
- ✗ **You may not push your own pieces** — enemy pieces only.
- ✗ **You may not push the king into, or through, check illegally** (normal check rules still apply).
- ✗ **Nothing “becomes” a bishop** — a rook or pawn on the bonus square is unaffected. Only a bishop triggers the push.

SEE IT IN ACTION

Worked Example — “Pin-and-Push”

A finish not available in ordinary chess — only the push can relocate an enemy piece.

The bishop enters d5 and pushes Black's e6 bishop to f7. That clears the e-file, so the rook on e1 gives a **check** the bishop could never have created by a normal move.

HOW THE GAME ENDS Win by checkmate, just like chess. No new win condition, no scoring — the push is simply a powerful new tool for getting there. Stalemate and draws follow standard chess rules.
